Summary

A Computer Science graduate with strong fundamentals in programming and software development. Experienced in Java, Python, and web technologies through academic projects, with exposure to databases and cloud deployment. Passionate about learning new technologies and building innovative software solutions.

Education

PRATHYUSHA ENGINEERING COLLEGE

Sep 2023 - Dec 2027

Bachelor of Engineering - BE, Computer Science and Engineering

- **Coursework:** Artificial Intelligence, Machine Learning, Data Science, Cloud Computing, Distributed Systems, Web Applications, Software Engineering, Information Security, Object-Oriented Programming, Database Management Systems

Skills

- **Programming Languages:** Python, Java, R, HTML, CSS, JavaScript, React,
- **Data Bases:** MySQL, MongoDB, NoSQL
- **Cloud Technologies:** AWS, Google Cloud Platform (GCP)
- **Visualization Tools:** Tableau, Advance excel, Git, GitHub,
- **IDE:** Jupyter, Postman, PowerPoint, IntelliJ, VSCode

Certifications

1. [Software Engineering Job Simulation](#)
2. [Solutions Architecture Job Simulation](#)
3. [Python for Data Science](#)
4. [UX Design introduction Simulation](#)
5. [Data Analytics Job Simulation](#)
6. [Cloud computing](#)
7. [Claude with Google Vertex AI](#)
8. [SAP Business Data Cloud](#)

Projects

Smart Expense Tracker

- Created a modular frontend architecture using **React** functional components and **Hooks**, implementing form validations, dynamic charts, and responsive layouts with Material UI.
- Developed a full-stack expense management web application using **Spring Boot (Java)** for the backend, React.js for the frontend, and **MySQL** for data persistence.
- Configured **AWS EC2** for application deployment and AWS RDS for database hosting; set up CI/CD pipelines through GitHub Actions for automated testing and deployment.

Online Food Delivery System

- Built a scalable food ordering platform using **Angular** for the frontend, **Node.js** (Express) for backend APIs, and **MongoDB** for data storage.
- Designed microservice-based architecture for restaurant, customer, and order modules with **RESTful APIs** supporting real-time updates via **WebSocket (Socket.IO)**.
- Implemented **JWT** authentication and role-based access control for admins, restaurants, and customers to ensure secure and personalized interactions.
